Model 710 Solenoid Valve (Normally Closed)

Application

Normally closed solenoid valves are used to help prevent the accidental siphoning of a product from a tank in the event of a leak downstream below the liquid level. They are generally installed on the dispensing side of a fuel system pipeline. The valve opens upon the receipt of an electronic signal such as when a dispenser or pump is switched to the 'on' position.

Features and Details

- · Normally closed, hung piston design
- Operates at 120 volts AC (24, 208, 220, 240, & 480 volts AC, and 12, 24, and 48 volts DC also available)
- Minimum operating temperature is -40°F
- Includes a continuous duty Class H standard coil. Other options are available
- Install in a horizontal pipeline in the upright vertical position
- · Zero pressure differential
- Integral thermal relief allows the valve to relieve expansion pressure in the opposite direction of flow
- Enclosure is watertight and rated for hazardous locations—NEMA 3, 4X, 7 and 9; groups C and D
- · Several optional coil voltages available
- Recommended for use with liquids having a maximum viscosity of 60 centistokes
- A strainer with a 100 mesh screen is recommended at the valve inlet
- 710 has a cast bronze body
- 710MO has manual override feature. Available in sizes ranging from ¾" to 2" for operation during a power outage
- 710SS has a stainless steel body

Materials of Construction

 Solenoid housed in an integral, watertight, explosion-proof shell

Certifications and Listings

CSA listed (File No. 108921, Model Z1314); Class I, Groups C and D; Class II, Groups E, F and G; Class III; T3C

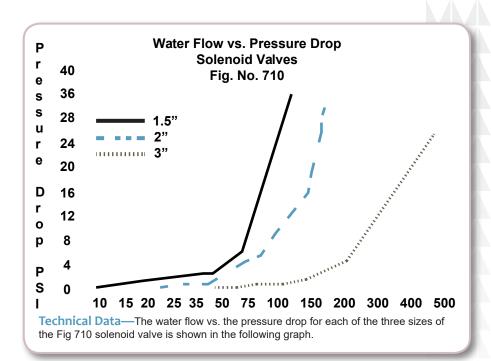

Item numbers, dimensions, and water flow vs. pressure drop chart on next page.
